

# Latest on Vanadium Flow Battery

## Overview

---

Are vanadium flow batteries the future of energy storage?

Vanadium flow batteries could make ideal choices for grid-scale energy storage. The many features of these batteries are something that Australia is looking to expand in the coming years.

What is a vanadium flow battery?

Vanadium batteries have a lower energy density – they are better at delivering a consistent amount of power over significantly longer periods. More importantly, a vanadium flow battery can handle far more charge-discharge cycles than a lithium-ion battery.

Who makes vanadium batteries?

1 MW 4 MWh containerized vanadium flow battery owned by Avista Utilities and manufactured by UniEnergy Technologies. A vanadium redox flow battery located at the University of New South Wales, Sydney, Australia.

What is a vanadium redox flow battery?

Vanadium Redox Flow Batteries (VRFB) are a cutting-edge type of rechargeable flow battery, that employs vanadium ions as the active materials. The unique properties of VRFBs gives manufacturers an edge in certain applications (e.g., utility/grid energy) over other batteries in the space.

## Latest on Vanadium Flow Battery
