

London Energy Company uses mobile energy storage containers for bidirectional charging

Overview

How will bidirectional charging impact the UK energy system?

Looking ahead, as more electric vehicles with bidirectional charging capabilities enter the market and as the necessary infrastructure continues to evolve, bidirectional charging is set to play a significant role in the broader transition to a more resilient, efficient, and sustainable UK energy system.

What is energy storage container?

SCU uses standard battery modules, PCS modules, BMS, EMS, and other systems to form standard containers to build large-scale grid-side energy storage projects.

How can a mobile energy storage system help a construction site?

Integrate solar, storage, and charging stations to provide more green and low-carbon energy. On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions.

What is a mobile energy storage system?

On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions. Maximum safety utilizing the safe type of LFP battery (LiFePO₄) combined with an intelligent 3-level battery management system (BMS);
