

Low-pressure type mobile energy storage container for oil refineries

Overview

What is a low pressure storage tank?

For the purpose of this page, we focus on the atmospheric or low-pressure storage tank widely used from the production fields to the refinery. The most common shape used is the vertical, cylindrical storage tank. Gross capacities can range from 100 bbl to over 1.5 MMbbl in a single storage tank.

What are oil storage tanks?

Hydrocarbon storage tanks are industrial containers designed to safely store products such as crude oil, gasoline, or diesel fuel. They are cylindrical and vertical, with fixed or floating roofs, and operate at atmospheric pressure.

What is a crude & HFO storage tank?

The Crude & HFO Storage Tank from TEC Container Solutions provides high-capacity, insulated static storage for crude oil, heavy fuel oils (HFO), and other high-viscosity products. Built with a double-walled, fully bunded design, it ensures environmental protection while maintaining stable product temperatures even in harsh conditions.

Why is hydrocarbon storage important in energy logistics?

Hydrocarbon storage is critical in energy logistics. In oil fields, small, modular tanks are used, while in refineries and terminals, large-volume tanks welded on-site predominate. In addition, in urban distribution centers, compact, buried or vertical tanks are used, adapted to reduced spaces and with automated measurement and safety systems.
