

Lusaka DC Uninterruptible Power Supply Sales

Overview

How does an uninterruptible power supply work?

The uninterruptible power supplies have e.g. an adjustable maximum buffer time to protect the battery and the unit protects the battery from going into a deep discharge. Draining the battery all the way down can damage it in a very short period of time, especially if this occurs multiple times.

What is a continuous power supply (UPS)?

UPS is the short version of "uninterruptible power supply". In many applications a continuous power supply is important because power fluctuations and outages can cause damage to control equipment as well as unexpected down time. This situation can lead to a loss of productivity and revenue.
