

Malabo portable ups uninterruptible power supply

Overview

What is an uninterruptible power source (UPS)?

An uninterruptible power source (UPS) is an electrical equipment that provides emergency power supply to a electric load when the input power source or mains power fails. A UPS differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power.

What is a ups & how does it work?

A UPS differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power interruptions, by supplying energy stored in batteries, supercapacitors, or flywheels.

How long does an uninterruptible power source last?

The on-battery run-time of most uninterruptible power sources is relatively short (only a few minutes) but sufficient to start a standby power source or properly shut down the protected equipment. It is a type of continual power system.
