

# Medium frequency inverter output voltage

## Overview

---

What is the AC output frequency of a power inverter?

The AC output frequency of a power inverter device is usually the same as standard power line frequency, 50 or 60 hertz. The exception is in designs for motor driving, where a variable frequency results in a variable speed control.

What is the output voltage of a multilevel inverter?

Each cell contains one H-bridge and the output voltage generated by this multilevel inverter is actually the sum of all the voltages generated by each cell i.e. if there are  $k$  cells in a H-bridge multilevel inverter then number of output voltage levels will be  $2k+1$ .

What voltage should an inverter output be?

The inverter output voltage should comply to the standard voltage level and has to be within 228V to 252 V. For U.S, the accepted voltage level is 110V. The inverter output voltage needs to be within 98 V to 122V. The output voltage should be in the range as mentioned above in order for it to be grid or appliance compatible.

What is a rated kVA capacity of an inverter?

The nominal voltage at the inverter electrical connection point (ECP) must match the nominal output voltage of the inverter. The rated kVA capacity of a transformer must be equal to or greater than the total nominal output power of all inverters connected to the transformer.
