

# Microinverter Storage System

## Overview

---

What is a micro-inverter solar inverter?

Micro-inverters are very small solar inverters, designed to fit one per panel, attached behind the panel. They allow optimal operation of each panel, with each panel able to operate independent of the rest of the array. They are particularly effective on complex roof layouts, or where there are shading issues.

How does a microinverter work?

Each Microinverter works independently that guarantees the maximum power generation of each photovoltaic module. This setup enables user to control the production of a single photovoltaic module directly, consequently improving the flexibility and reliability of the system.

How to pack a microinverter?

Please pack the Microinverter with the original packaging, or use the carton box that can afford 5kg weight and can be fully closed if the original packaging is no longer available. 8.2 Storage and Transportation: Hoymiles packages and protects individual components using suitable means to make the transport and subsequent handling easier.

What is the storage temperature of a microinverter?

The Microinverter storage temperature is  $-40-85^{\circ}\text{C}$ . 8.3 Disposal: If the equipment is not used immediately or is stored for long periods, check that it is correctly packed.
