

# Mobile energy storage distribution network

## Overview

---

Can mobile energy storage systems be used in an active distribution network?

Mobile energy storage systems (MESSs) are able to transfer energy both spatially and temporally, and thus enhance the flexibility of grid in normal and emergency conditions. In this paper, a multi-objective framework is presented for planning of MESSs in an active distribution network (ADN).

Can a mobile energy storage resource (MESR) based power distribution network be restored?

Existing mobile energy storage resource (MESR)-based power distribution network (PDN) restoration schemes often neglect the interdependencies among PTIN, thus, efficient PDN restoration cannot be achieved.

What is mobile energy storage system (mess)?

Among the resources available for distribution network scheduling, the mobile energy storage system (MESS) is an effective elastic resource suitable for enhancing system resilience in various response stages and is expected to become one of the most promising technologies in the distribution network.

Can mobile energy storage system scheduling reduce power outage losses?

Actively scheduling various resources to provide emergency power support can effectively reduce power outage losses caused by extreme weather. This paper proposes a mobile energy storage system (MESS) scheduling strategy for improving the resilience of distribution networks under ice disasters.
