

# Mobile power base station

## Overview

---

How does a mobile base station work?

By combining fossil-free hydrogen, fuel cells, solar panels, and batteries, this innovative solution sets a new standard for ensuring connectivity during prolonged power outages. Today, mobile base stations primarily rely on electricity from the power grid, with batteries and diesel generators providing backup.

What is a mobile phone base station?

A mobile phone base station is a telecommunications infrastructure used to send and receive RF signals from mobile phones. The frequencies used typically range from 900 MHz to 2.45 GHz, with powers varying from 1 W for indoor antennas to 40 W for those at high elevations.

How long does a mobile base station backup power last?

In a groundbreaking pilot project in Roslagen, Sweden, Telia and the Swedish Post and Telecom Authority (PTS) have extended the backup power duration of a mobile base station from 4 hours to 110 days.
