

Nairobi Crystalline Silicon solar Curtain Wall Project

Overview

What is crystalline silicon curtain wall?

Crystalline silicon curtain wall is a building material combining polycrystalline or monocrystalline silicon module array with the curtain wall. Its advantages are high photoelectric conversion efficiency, small installation size, mature material production and technology.

What are the different types of PV curtain wall?

At present, there are two main technical modes of PV curtain wall: one is crystalline silicon curtain wall and the other is amorphous silicon curtain wall. Crystalline silicon curtain wall is a building material combining polycrystalline or monocrystalline silicon module array with the curtain wall.

What is a PV curtain wall?

The PV curtain wall is the most typical one in the integrated application of PV building. It combines PV power generation technology with curtain wall technology, which uses special resin materials to insert solar cells between glass materials and convert solar energy into electricity through the panels for use by enterprises.

What is on-grid PV curtain wall?

On-Grid PV curtain wall has the dual characteristics of glass building materials and PV power generation. As a building material for power generation, PV curtain wall is mainly applied to the lighting roof, curtain wall facade, shading wall and other areas of commercial high-rise buildings.
