

# **New energy battery energy storage utilization**

## Overview

---

According to the IEA's Batteries and Secure Energy Transitions published on April 25, the global market for BESS doubled in 2023, reaching over 90 GWh and increasing the volume of battery storage in use to more than 190 GWh. Are battery technologies the future of energy storage?

While experimental and emerging battery technologies present exciting opportunities for enhancing energy storage solutions, they also come with a host of challenges and limitations.

Are battery energy-storage technologies necessary for grid-scale energy storage?

The rise in renewable energy utilization is increasing demand for battery energy-storage technologies (BESTs). BESTs based on lithium-ion batteries are being developed and deployed. However, this technology alone does not meet all the requirements for grid-scale energy storage.

Why do we need a battery energy-storage technology (best)?

BESTs are increasingly deployed, so critical challenges with respect to safety, cost, lifetime, end-of-life management and temperature adaptability need to be addressed. The rise in renewable energy utilization is increasing demand for battery energy-storage technologies (BESTs).

How is the government advancing energy storage technologies?

The government has been continuously advancing energy storage technologies, with several compressed air energy storage, flow battery storage, and sodium-ion battery storage projects put into operation across the nation, Bian Guangqi, an NEA official, said at the conference.
