

North America Base Station Communication System Installation

Overview

How do I set up a base station?

Set up the base station using either the tripod or T-bar mounting method. You must use an external radio antenna kit for the internal 450 MHz or 900 MHz radio. To avoid interference between the 900 MHz radio and GPRS transmissions, do not mount the external radio antenna within 1 m (3.3 ft) of the GSM antenna.

Can I install a base station CB system in my home?

Yes, but with limitations. Consider indoor antennas, magnetic balcony mounts, or window feedthrough antennas. Always check lease agreements and be respectful of neighbors regarding interference. Setting up a base station CB system opens a world of communication possibilities far beyond what mobile installations offer.

Where should a base station be installed?

The location is the actual environment in which the base station will be installed. Typically, this means outside in an open sky environment (e.g. on the roof of a building or in an empty field). Figure 2 shows a typical fixed installation of several antennas, including a VeraChoke and a VeraPhase 6000, on a roof.

How much does a base station CB cost?

HOA and Zoning: Check local regulations and homeowner association rules before installing visible antennas. How much does a complete base station CB setup cost?

Basic setups start around \$300-500, including radio, antenna, coax, and power supply. Mid-range systems run \$500-1000, while premium installations can exceed \$2000.
