

Norwegian Garden Energy Storage Power Generation

Overview

How can Norway increase low-carbon electricity generation?

To increase low-carbon electricity generation, Norway could consider expanding its clean energy portfolio, particularly through the development of solar and nuclear energy. The diversification of clean energy sources can ensure a stable and resilient electricity supply, especially during periods when hydropower is affected by variable water levels.

Is stationary energy storage a good idea in Norway?

Electric cars now account for 79 per cent of new cars sold in Norway, and the MS Medstraum was recently launched as the world's first electric fast ferry. In a global report on lithium-ion batteries, Norway ranked first in sustainability. These are impressive records. Even so, stationary energy storage is beginning to steal the limelight.

How does Norway generate electricity?

Norway has achieved remarkable success in generating electricity from low-carbon sources, with a staggering 99% of its electricity coming from clean energy. This is due largely to the extensive use of hydropower, which constitutes a significant 90% of the country's electricity mix.

Does Norway have a battery market?

Today Norway has not one, but two huge battery markets. "There are two market drivers for batteries: EVs and stationary energy storage. Energy storage is coming on strong now. It's the key to turning intermittent wind and solar into a stable energy source," explains Pål Runde, Head of Battery Norway.
