## Overview

---

How does an off-grid 15kW solar system work?

In an off-grid 15kW solar system there are two ways to run your electrical load, first is solar power and second is batteries. Solar batteries are such a component that you do not get in an on-grid solar system but are definitely available in an off grid system. Solar panels generate DC electricity by absorbing sunlight.

What is a 15kW hybrid solar system?

A 15kW hybrid solar system seamlessly integrates the advantages of both on-grid and off-grid solar systems, connecting to the electricity grid for the sale of excess power and incorporating a battery bank for energy storage during grid outages or high-demand periods.

How does an off-grid solar system work?

The 15kW off-grid solar system, equipped with a backup, functions autonomously and operates independently of the grid, serving as a standalone power solution. Commonly used in remote areas or utilized as a backup during outages, it provides self-sufficient power.

How does a 15 kW solar system work?

In addition to these components, a 15 kW solar system ensures a continuous power supply for the home by incorporating a reliable battery bank. This battery bank acts as a storage solution for excess energy when solar production decreases.
