

One-to-two solar lights in Busan South Korea

Overview

Does Busan have a renewable power generation system?

Therefore, this study investigates an optimized renewable power generation system for Busan metropolitan city, South Korea's second-largest city, by using its electricity consumption data.

Why is Busan a major city in South Korea?

Population and location Busan metropolitan city is one of South Korea's largest cities. Its deep harbor and slow ocean currents helped Busan metropolitan city grow into one of Asia's major container distribution ports. The center of the city is $34^{\circ} 37'$ of latitude and $128^{\circ} 31'$ of longitude.

Can wind power be used in Busan Metropolitan City?

However, this research shows that using wind power for Busan metropolitan city is highly economically feasible and that a hybrid system using solar and wind power is most economically feasible. Thus, the best way to offer clean and economical energy is to expand wind generation and use more PV-wind hybrid system.

What is the optimal renewable power generation system for Busan Metropolitan City?

The HOMER simulation recommends a system employing 258 wind turbines, 4130 PV panels, 1482 converters, and 5525 batteries as the optimal renewable electricity generation system at a 1/500 scale for Busan metropolitan city. The results of the simulation are shown in Table 7. Table 7. The suggested optimal renewable power generation system.
