

Phase change energy storage in solar power generation

Overview

This paper briefly reviews recently published studies between 2016 and 2023 that utilized phase change materials as thermal energy storage in different solar energy systems by collecting more than 74 examples from the open literature. What is phase change material thermal energy storage?

Storage concept The phase change material (PCM) thermal energy storage (TES) considered in this study utilizes the latent energy change of materials to store thermal energy generated by the solar eld in a concentrated solar fi thermal power plant. It does this using an array of materials organized based on melting temperature.

Can phase change materials be used for solar energy storage?

Nowadays, a wide variety of applications deal with energy storage. Due to the intermittent nature of solar radiation, phase change materials are excellent options for use in several types of solar energy systems.

What is phase change energy storage technology?

Phase change energy storage technology is based on phase change energy storage materials as the basis of high technology, phase change materials Phase change latent heat is large, much larger than the apparent heat energy storage density.

What is phase change heat storage for solar heating?

Phase change capsules (PCC) of paraffin wax are stacked over various sieve beds to create porous layers of heat storage in a new method of phase change heat storage for solar heating reported by Chen and Chen (2020) [103]. The flow of heated air in the system is propelled by the buoyancy force produced by the solar chimney.
