

Poland Krakow solar panels generally have more current than

Overview

What is the current condition of the photovoltaics sector in Poland?

The following article explains the current condition of the photovoltaics sector both in Poland and worldwide. Recently, a rapid development of solar energy has been observed in Poland and is estimated that the country now has about 700,000 photovoltaics prosumers. In October 2021, the total photovoltaics power in Poland amounted to nearly 5.7 GW.

What percentage of Poland's electricity comes from solar energy?

In 2020, 1.5% of the country's electricity came from PV sources. In 2021, it will be 3.5%, and by 2025, solar energy will provide approx. 10% of Poland's electricity. It is worth examining the development of photovoltaics from a broad and long-term perspective.

Will solar power be a good investment in Poland in 2025?

Thanks to additional government subsidies for small private PV systems and high electricity prices of over 30 eurocents per kilowatt hour for companies, investments in own electricity generation in both areas will become attractive in 2025. In September 2024 alone, PV systems with a total power of 363.53 megawatts were installed in Poland.

Is photovoltaics a good investment in Poland?

With current electricity prices, photovoltaics is particularly economical in the commercial sector, which also promises greater performance in installations than the small-scale market for private systems. Poland can be seen as a long-term reliable growth market with excellent prospects. (MG)
