

# Portable generator energy storage

## Overview

---

Can a portable power station be turned into a solar generator?

Using DJI's solar panels, you can turn your portable power station into a solar generator. This setup provides all the unlimited energy the sun has to offer, without the noise, pollution or recurring fuel payments associated with a traditional generator.

What is a portable power station?

A portable power station is a small battery storage generator that can be charged and provides power where and when you need it. This makes them good off-grid power sources when you need backup power during a power outage, are heading into the wilderness, or are working remotely on a job site.

Can a DJI portable generator be used as a solar generator?

DJI portable generators are built to be mobile, last, and produce power. Whether it is powering your mini-fridge, charging your drone or running tools, wherever you are. Using DJI's solar panels, you can turn your portable power station into a solar generator.

Do portable power stations use gasoline?

Portable power stations do not use gasoline like generators. Rather, they stow away electrical energy, which can then be used to charge or run several devices. Many even work with solar panels for some of the sweetest off-grid power ever to exist on the go, turning your battery bank into a solar-powered generator.
