

Putting solar container outdoor power at home for a long time

Overview

Can you build your own Solar System?

Whether you're preparing for a more sustainable lifestyle, reducing your reliance on the grid, or just powering a cabin or van, building your own solar system can be incredibly rewarding. In this guide, we'll walk through the entire process, step by step, with clear language and practical tips—no electrical engineering degree required.

Can I build my own off-grid solar power system?

From there, you can expand your system with more panels or batteries as needed. Building your own off-grid solar power system can feel intimidating—but with the right info, it's totally doable. Take your time, start with a modest system, and enjoy the process. The freedom of producing your own power is well worth the effort.

How much power does a DIY solar system use?

This isn't our first rodeo - we have a similar install video of our much larger, more complicated DIY solar system - it has 10kw of solar, 28kwh of lithium battery storage, and 5000w of 120V AC power. We'll be referring to this project a lot as it informed a lot of the decisions we've made for this system.

How many watts a day should a solar panel run?

Make a list of all the devices you want to run—lights, fridge, laptop, router, etc.—and look up their wattage. Then estimate how many hours per day each item will be used. Use this formula: Add everything up. Most off-grid setups aim for anywhere between 500Wh to 5,000Wh per day, depending on use. Solar panels are rated by watts.
