

Recommendation of uninterruptible power supply for mining in Bolivia

Overview

What is mining ups power supply?

What is the Mining UPS Power Supply?

Mining emergency UPS power supply is an uninterruptible power supply containing an energy storage device. It is mainly used to provide uninterrupted power supply to some of the equipment with high requirements for power stability.

What type of power supply is used for mining?

3, the current market common mining ups have single-phase and three-phase two forms. (1), three-phase three-phase synchronous type: this type of emergency power supply for mining consists of three inverters of the same power (i.e. three independent inverters), the output voltage and current of each inverter is the same.

What are the requirements of a mine ups?

2, due to the harsh environment under the mine, so the requirements of the mine UPS with high stability, high reliability and high security and applicability characteristics. At the same time, in order to meet the needs of coal production, but also need to have good scalability and strong anti-interference ability.
