

Recommended home solar lights

Overview

How much sunlight does a solar panel need?

Generally, eight-10 hours of direct sunlight per day, will produce around 15 hours of illumination. But this will depend on location, type of light and exposure it gets. It's best to place your lights in an area that isn't shaded by trees, walls or even certain roofs, as these can obstruct the amount of light the solar panels receive.

How do I choose a solar light for my Garden?

Think about what tone of lighting you want in the garden as well. Most solar lights use LED bulbs which project a white light. Some may find this too harsh, especially if it's lighting where you plan to entertain guests! If you want a warm or soft tone, invest in solar lights with tinted covers.

What kind of Lights do you need for a house at night?

Wall Lights: As the name suggests, solar wall lights are installed on the external walls or fence of your property and provide light immediately around it. These are great for added guidance and security at night. Step Lights: Solar step lights are a must-have if you struggle with steps around your property at night.

How to choose solar lights?

Don't forget about what the solar lights will look like during the daytime as well. You don't want them to look too cluttered or obtrusive. Some come with stainless steel casing to give a more premium appeal, while others have glass lampshades. Some can also be concealed easily as well, but make sure they're not a tripping hazard.
