

Seven 21700 solar container lithium battery pack

Overview

What is a CMB 7s lithium battery pack?

CMB's 7S 25.2V lithium battery pack utilizes high-performance 21700 cells, offering superior energy density, excellent cost-effectiveness, and an extended cycle life. Compared to traditional 25.2V 18650 battery packs, these advanced power solutions are emerging as the preferred choice in the market.

What is a 21700 battery pack?

If you've been around anything that runs on lithium batteries—whether it's drones, e-bikes, power tools, or even flashlights—you've probably noticed the buzz around 21700 battery packs. The name comes from the size: 21 mm in diameter and 70 mm in length.

Is a 21700 Battery Worth It?

Sure, it's pricier than a traditional 18650 setup, but the efficiency gain makes it worth it. Not all 21700 cells are built the same. Some are optimized for high capacity (great for long runtime), while others are tuned for high discharge rates (better for power-hungry tools or drones).

How much power does a 21700 mAh battery hold?

You don't really notice the size increase, but you definitely feel the performance upgrade. At its core, a single 21700 cell usually holds 4000–5000 mAh with a nominal voltage of 3.6–3.7 V. Fully charged, it hits 4.2 V, and cutoff usually happens around 3.0 V.
