

Singapore solar container energy storage system Integrator

Overview

What is Singapore's solar energy system (ESS)?

Built across two sites on Jurong Island, our ESS enhances Singapore's grid resilience by mitigating the impact of solar intermittency as the republic progresses towards achieving its 2030 solar target of at least 2GWp and energy storage systems deployment of 200MWh beyond 2025.

Why should you install ESS / solar battery systems in Singapore?

This gives you greater energy control, cost savings, and reliability across any site type in Singapore. Integrating an ESS / solar battery system offers numerous advantages: Use more of the clean energy generated by your own solar panels instead of exporting it.

How does ESS work in Singapore?

Due to limited renewable resources, solar power remains Singapore's primary renewable energy solution. However, the intermittent nature of solar power presents grid management challenges. The ESS system directly addresses this by: Quickly responding to grid demand fluctuations. Enhancing grid reliability and resilience.

What is Singapore's first utility-scale energy storage system?

Singapore's launch of its first utility-scale Energy Storage System represents a landmark step towards sustainability and improved energy resilience. Developed by the Energy Market Authority (EMA) and SP Group, this project features two test-bed installations with a total storage capacity of 4.4 MWh, sufficient to power hundreds of homes for a day.
