

# Solar glass display effect

## Overview

---

How do Photovoltaic windows work?

In photovoltaic windows, the glass itself is embedded with transparent or thin-film solar cells, or coated with an invisible conductive solar material, allowing the window to act like a solar panel without blocking the view.

How does solar glass work?

The glass is coated with thin layers of semiconductor materials, such as silicon, that can absorb sunlight and generate an electric current. When sunlight hits the solar glass, the photons in the light excite the electrons in the semiconductor material, creating an electric charge that can be harnessed as electricity.

What makes a solar screen different?

Photovoltaic Integration: What truly sets modern solar screens apart is the option to integrate photovoltaic (PV) cells into the screen material. This creates a photovoltaic screen, meaning the window screen not only shades your home but also generates electricity from sunlight.

What is Photovoltaic Glass?

Photovoltaic glass is also referred to as solar windows, transparent solar panels, transparent photovoltaic glass, solar glass and photovoltaic windows. Many manufacturers refer to this genre as transparent photovoltaic glass, but we see no reason for the glass to be limited to only transmitting visible wavelengths (approx. 380 nm to 750 nm).

## Solar glass display effect
