

Solar glass production machinery

Overview

What is solar glass processing technology?

Our solar glass processing technology focuses on precision and productivity. Featuring a high degree of automation, our advanced solutions deliver high accuracy and quality. You can optimize profitability with streamlined solar glass production that adapts to evolving market demands. Maximum precision and productivity in quarterlite production.

What is solar glass manufacturing plant?

Solar glass manufacturing plant is a facility specifically for making specialized low-iron, high-transmittance glass for use in photovoltaic (PV) modules. It entails raw material melting, float or rolled glass forming, annealing, cutting, tempering, and surface treatments like anti-reflective or self-cleaning coatings.

What equipment is needed for solar glass production?

Equipment Selection: High-quality, corrosion-resistant machinery tailored for solar glass production must be selected. Essential equipment includes batch house, furnace, tin bath, annealing Lehr, tempering furnace, edge grinding and cutting machines, coating line, inspection systems and laminating and packaging units.

What is a solar glass factory?

Solar glass factories are backing the clean energy industry and are critical for the manufacturing of modules installed in utility-scale solar farms, rooftop systems, and building-integrated photovoltaics (BIPV).
