

# Solar inverter shutdown

## Overview

---

How do you shut down a solar inverter?

**Step 3: Turn Off the AC Disconnect** The first step in shutting down your solar inverter is to turn off the AC disconnect. This switch is usually located near the inverter and cuts off the alternating current (AC) from the inverter to your home's electrical panel.

- Locate the AC disconnect switch near your inverter.

Should I Turn Off my solar inverter?

Turning off your solar inverter might be necessary for various reasons, including system maintenance, troubleshooting, or during an emergency. Properly shutting down your solar inverter ensures safety and prevents damage to the system. This guide provides a detailed, step-by-step process to safely turn off a typical solar inverter.

When should a solar inverter be shut down?

In such a case, it is better to shut down the solar inverter. Another example can be during a power outage. In such a case, the solar inverter shuts down automatically due to no supply of electricity. The inverter also shuts down when the voltage power is too high. Sometimes, the inverter displays a warning notice if the PV system fails.

What is the manual shutdown procedure for a solar PV system?

The manual shutdown procedure can be a useful tool for solving errors and glitches that you're experiencing with your solar PV power system. Follow the guide below to power down your system (and switch it back on again).
