

Solar panel conversion inverter

Overview

What is a solar inverter?

A solar inverter, or solar panel inverter, is a device that converts the direct current (DC) output of solar panels into alternating current (AC). Our homes and the electrical grid use AC power, so the inverter is essential for integrating solar energy into our daily use.

Can a solar inverter power a home?

Without a solar inverter, you wouldn't be able to use those solar panels to power your home. A solar inverter's job is simple: It converts the direct current -- the electricity generated by your solar panels -- into alternating current electricity that your appliances run on.

Do solar panels need an inverter?

Solar panels can work without an inverter if the devices they power use DC. However, to use solar-generated electricity for standard household appliances, which typically run on AC, an inverter is necessary to convert DC from the panels into usable AC. How does a solar inverter work?

A solar inverter's job is simple: It converts the direct current -- the electricity generated by your solar panels -- into alternating current electricity that your appliances run on. Selecting the right solar inverter for your home is tricky, but most solar installers usually handle the task, meaning you likely won't have much choice.
