## Overview

What is a solar panel inverter?

The solar panel inverter is the heart and soul of your solar power system. It connects directly to your solar panels to convert the DC current electricity produced by solar panels into AC current electricity you can use in your home, store in a battery or feed back into the power grid.

How do I set up a solar inverter?

Existing inverters in grid-tied systems operate from a control panel. Set the amount of amps you need your inverter to pull from the solar panels. You can also switch of the electricity grid in a way the system runs on solar a ray only. Start the system and check if the control panel is sending any current to your inverter.

How does a solar inverter work?

Solar panels harvest energy from the sun and send it to the solar battery in one direction as DC. Since most appliances at a home run in AC, an inverter is incorporated into the solar PV system. The inverter converts the Direct Current into Alternating Current which is sent in different pieces in one second.

Does a solar panel send current to an inverter?

However, a solar panel does not send current to an Inverter. An Inverter pulls the current it needs from the solar panel. If the solar panel is 10kilowatts and your inverter needs 5killowatts, the inverter will only pull 5kilowatts from the solar panels. If you have more space on your rooftop to add more panels, then you should add them.
