## Overview

---

What is a 170 watt solar module?

The Go Power! 170 watt Solar Module is our largest, single panel solar module with aluminum frame. The GP-PV-170M Solar Module from Carmanah is a high-efficiency monocrystalline solar module that provides outstanding performance and cost-effective solar power for high-end off-grid and mobile applications.

How many solar panels does a 1500 watt solar panel need?

To run a 1500 watt heater, you would need at least 5 x 300W solar panels. Assuming each PV module can produce 300 watts an hour, five of these would be good for 1500 watts. However, there are several factors that can affect solar panel production, making it difficult for a solar panel to generate 300 watts an hour.

What is a GP-pv-170m solar module?

The GP-PV-170M Solar Module from Carmanah is a high-efficiency monocrystalline solar module that provides outstanding performance and cost-effective solar power for high-end off-grid and mobile applications. This solar module is built to last and features a 25-year limited power output warranty.

How much does a 400W Tier 1 solar panel cost?

A 400W Tier-1 panel is ¥320-¥520 (\$45-\$75) in China vs \$200-\$350 in the US. China produces 80% of global solar panels. Massive factories reduce unit costs. Local polysilicon production cuts supply chain expenses.
