

Solar panels can be directly attached to tiles

Overview

Can you install solar panels on tile roofs?

Short Answer: Yes, you can install solar panels on tile roofs, but the process requires specialized knowledge and equipment to ensure proper installation and avoid damage to the roof. Installing solar panels on tile roofs is not only possible but can be highly effective.

How do I install solar panels on a lightweight tile roof?

The best way to install solar panels on a lightweight tile roof is through a method called inset solar installation, also known as a “comp-out” installation. This technique removes the section of tile where the solar panels will be installed and replaces it with composite shingles before mounting the solar array.

Can solar panels be installed on lightweight tiles?

If installers attempt to mount solar panels directly onto lightweight tiles, several issues can arise: Tile breakage: Walking on or drilling through these tiles can cause cracks or breaks, which may lead to roof leaks and structural damage.

Can solar panels damage a tile roof?

Future damage from vibrations: Even if tiles remain intact during installation, they can weaken over time. Wind moving between the solar panels and the racking system can create vibrations that cause tiles to crack down the road. Because of these risks, standard installation methods won't work for tile roofs—especially lightweight ones.
