

Solar panels rooftop paving with tight seams

Overview

What is a metal standing seam roof with bonded solar panel?

This metal standing seam roof with bonded solar panel delivers an efficient and effective roofing system that performs just as well as it looks. Unlike traditional mounted solar photovoltaics systems, Catnic SolarSeam is bonded to the roof panel, offsite, creating a low-profile and seamless finish that's guaranteed to produce energy for 25 years.

Can solar be installed on a standing seam metal roof?

Conveniently, installing solar on a standing seam metal roof does not require drilling holes, decreasing the risk of leakage or damage. Multiple manufacturers have developed specific solutions for standing seam roofs where clamps are attached to the vertical ribs of the roof panels' edges.

How do I choose the best solar panels for my roof?

Here's what you need to consider beyond just the roof type: The angle and orientation of your roof are essential for maximising the performance of your solar panels. For optimal sunlight exposure, solar panels should ideally be installed on a roof that has a pitch of about 30 to 40 degrees.

What are the best and worst roof types for solar panels?

Discover the best and worst roof types for solar panels to ensure a smooth installation and maximum efficiency. Most roofs can support solar panels, but some materials and designs make installation smoother, safer, and more cost-effective. Tile roofs (clay, ceramic, concrete) – durable, long-lasting, and visually appealing.
