

Solar panels stick out of the roof

Overview

Does a roof last longer than solar panels?

In most cases, solar panels last longer than the roofing material. It's always best to have your roof evaluated before installing solar panels to determine if the roof can support an installation and if it is not nearing the end of its life-cycle.

What is solar panel roof mounting?

Solar panel roof mounting is the process of securely attaching photovoltaic panels to your home's roof structure using specialized mounting systems. This critical installation step determines both the safety and performance of your solar energy system for decades to come.

How to hide solar panels on your roof?

To hide solar panels on your roof, you could opt for the all-black solar panels or aluminum coverings that mimic your roof's color. Otherwise, you may choose in-roof solar panels, building-integrated solar panels, solar roof skins, or invisible photovoltaic roof tiles.

How are solar panels affixed to a roof?

Solar panels are affixed to a roof in a variety of ways. If you have tiles, the panels will usually be affixed to the rafters underneath. Even though some of your tiles are covered, you still need to keep an eye on them in case they start to exhibit problems. As with any DIY job, the longer it's left, the worse it will be.
