

Solar power station for home in New-Zealand

Overview

Which solar power systems are most commonly installed in New Zealand?

This comprehensive guide aims to demystify the key solar power systems commonly installed in New Zealand – off-grid, grid-tie, and hybrid/grid-tie with energy storage (ESS) – the energy storage system is almost always battery.

How do solar panels work in New Zealand?

Grid-Tie Systems – Grid-tie solar systems, which are connected to the public electricity grid, are the most common solar installation in New Zealand. They use solar panels to generate power during the day, with any excess fed back into the grid for a credit on the owner's power bill.

Can a solar panel system be used in New Zealand?

A: Yes! New Zealand gets between 1,700 and 2,400 hours of sunlight per year – more than enough for a solar panel system for home use. With rising electricity prices and government support for solar energy buyback, many homeowners see a full return on their investment within 7–9 years.

How much does a power station Solar System cost?

Pricing starts at \$29,500 inc GST for an 'average' home. The Power Station Independent Energy System (IES) is a new concept in independent living. Made by Power Station in New Zealand, it's a fully off-grid solar power system that can be installed in an existing grid-connected home.
