

Solar powered 3 7 volt water pump

Overview

What is a 3 hp solar water pump?

On grid 3 HP solar water pump is a grid tied water pumping system. In this system, the solar pump can be powered by direct solar energy as well as the government grid. If the solar panels generate more energy than the 3 HP solar pump's consumption, the excess power is exported to the grid via net metering.

What are solar energy-powered water pumps?

Solar energy-powered water pumps are water pumps running on the electricity that is generated by solar energy. For generating solar power, solar photovoltaic (PV) systems are used for complementary energy sources, they are deployed alongside diesel pumps in areas with plenty of sunshine and where the cost to run power lines is high.

What is the horsepower of a solar water pump?

Solar water pumps typically have a horsepower of 2 or less. Well installed quality PV water pumping systems can provide over 20 years of reliable and continuous service. For more information, you can design a solar water pumping system using the Energy Matters on-line system builder.

What are the different types of solar water pumps?

There are several different types of solar-powered pumps. But primarily there are four types of solar water pumps, they are submersible pumps and surface pumps, direct current (DC) pumps, and alternate current (AC) pumps. Submersible pumps: The submersible pumps are located deep below the ground level and are submerged underwater.
