

Solar single-axis tracking system

Overview

What is a single axis solar tracking system?

Kiyak and Gol developed a single-axis solar tracking system based on both fuzzy logic and a Proportional Integral Derivative (PID) controller using an Atmel microcontroller. According to the angle of solar energy, a solar panel is oriented to the side where light intensity is greatest by being designed for the related supervisory controllers.

How do single axis solar trackers improve efficiency?

By moving east to west to follow the sun's path across the sky, single-axis trackers improve efficiency by 25-35%. The primary characteristic of single-axis solar trackers is their single-axis movement and orientation. Single-axis trackers rotate along a single axis, typically oriented east-west.

What are the different types of single axis solar trackers?

There are four main types of single axis solar trackers. These are Vertical Single-Axis Solar Trackers (VSAT), Vertical-Tilted Single-Axis Solar Trackers (VTSAT), Horizontal Tilted Single-Axis Solar Trackers (HTSAT), and Horizontal Single-Axis Solar Trackers (HSAT).

How much does a single axis solar tracker cost?

The cost of single-axis solar trackers is a significant factor when considering their purchase. The cost varies widely depending on the size and type of the tracker and the manufacturer. The average price of a single-axis solar tracker is \$2,000 to \$5,000 or more per tracking system for a residential installation.
