

Solar ultra-white glass components

Overview

What are solar cells made of?

It is composed of low iron glass, solar cells, film, back glass, and special metal wires. The solar cells are sealed between a low iron glass and a back glass through film, making it the most innovative high-tech glass product for construction. Using low iron glass to cover solar cells can ensure high solar transmittance.

What is ultra white Photovoltaic Glass?

Ultra white photovoltaic raw glass can be processed into ultra white photovoltaic processed glass through tempering process, which can achieve ideal mechanical strength to resist adverse weather conditions and other factors of damage. During the tempering process, an anti reflective coating can be added to improve efficiency. (3) TCO glass.

What is Photovoltaic Glass?

Photovoltaic glass is a special type of glass that utilizes solar radiation to generate electricity by laminating into solar cells, and has relevant current extraction devices and cables. The glass used in photovoltaic power generation is not ordinary glass, but TCO conductive glass.

Which glass is used in photovoltaic power generation?

The glass used in photovoltaic power generation is not ordinary glass, but TCO conductive glass. HHG is a professional glass manufacturer and glass solution provider include range of tempered glass, laminated glass, textured glass and etched glass.
