

String inverter and solar array

Overview

What is a solar string inverter?

Solar string inverters have an input for each string, which is made up of solar panels connected in sequence. A photovoltaic or PV array is created when two or more solar panels are connected. So, what is the difference between string and array in solar panel?

Read the blog to learn about what is a string of solar panels and other related facts.

How many solar panels are in a string inverter?

Three strings are input into the inverter, which is appropriately named a string inverter. Three strings of eight panels each are intended to be connected to those inputs by this method. (totaling 24 panels). Now, let's also thoroughly see what is an array in solar panel.

What is a solar string?

A string consists of solar panels wired in a series set into one input on a solar string inverter. If you have two or more solar panels wired together, that is a solar / PV array. String sizing refers to how many solar panels can and should be wired to an inverter for best results.

What is the difference between a solar array and a string?

To quickly recap, a solar array consists of two or more solar panels wired together, and a string refers to solar panels wired into one inverter input. The good news is you do not have to be an expert in these to avail of solar power.
