## Overview

---

Why is lithium energy storage a trend in Telecommunications industry?

Lithium energy storage has become a trend in the telecommunications industry. The rapid development of 5G, Battery Management System (BMS) and battery cells. They provide simple functions and exert high expansion cost, and costs of 5G networks and driving energy structure transformation. drive the evolution of energy storage towards intelligent.

How does 5G drive the evolution of energy storage?

Costs of 5G networks and driving energy structure transformation. drive the evolution of energy storage towards intelligent current mainstream "end-to-end architecture", because it falls short of outer site coordination and scheduling of and ultimately to the intelligent.

What makes lithium batteries intelligent?

Intelligent management that makes lithium batteries intelligent. At L2, lithium batteries are capable of independent execution, partial perception, and partial analysis. With a basic BMS, lithium batteries are connected through the power supply system to the EMS that provides basic functions like voltage/ current balance
