

Switzerland Zurich 21700 battery cell

Overview

What is a 21700 lithium ion battery?

21700 Li-ion battery cells are a popular and relatively new standard for rechargeable lithium-ion batteries. Named after their dimensions (21mm in diameter and 70mm in length), these cells offer a larger capacity and higher energy density compared to the older 18650 format.

Why should you buy a 21700 battery?

This increase in size allows the 21700 to deliver higher energy storage and improved performance. The larger size of the 21700 cell enables it to store more energy, making it ideal for applications requiring high power capacity, such as electric vehicles and industrial battery packs.

What is the difference between a 21700 and a smaller battery?

One of the standout features of the 21700 is its higher capacity and energy density compared to smaller batteries. This allows it to power larger devices, such as electric vehicles and solar energy storage systems, with more reliable performance and fewer recharges. As mentioned earlier, the 21700 battery is 21mm in diameter and 70mm in length.

Why do electric vehicles use 21700 cells?

For instance, electric vehicles can use 21700 cells to store more energy in less space, resulting in longer driving ranges without increasing the size of the battery pack. A 21700 cell refers to an individual battery unit, while a 21700 pack is a configuration of multiple cells connected in series or parallel.
