

Telluride separator thin film solar glass

Overview

Our CdTe glass panels utilize advanced Cadmium Telluride (CdTe) thin-film technology, designed to deliver high efficiency, durability, and performance even in challenging environments. What are the advantages of cadmium telluride (CdTe) thin film solar cells?

1. Introduction Cadmium Telluride (CdTe) thin film solar cells have many advantages, including a low-temperature coefficient ($-0.25\ \%/^{\circ}\text{C}$), excellent performance under weak light conditions, high absorption coefficient ($105\ \text{cm}^{-1}$), and stability in high-temperature environments.

What is a second-generation thin film solar cell?

Second-generation thin film solar cells include hydrogenated amorphous silicon (a-Si:H) solar cells, cadmium telluride (CdTe) solar cells, and copper indium gallium selenide (CIGS) solar cells.

What is cadmium telluride (CdTe) photovoltaic (PV)?

The United States is the leader in cadmium telluride (CdTe) photovoltaic (PV) manufacturing, and NREL has been at the forefront of research and development in this area. PV solar cells based on CdTe represent the largest segment of commercial thin-film module production worldwide.

What are the different types of thin film solar cells?

This chapter provides an overview of thin film solar cell technology, focusing on various types such as amorphous silicon (a-Si), cadmium telluride (CdTe), copper indium gallium selenide (CIGS), and organic-inorganic perovskites-based solar cells (PSCs).
