

Thailand Super Aluminum Electrolytic Capacitor

Overview

What is a polymer aluminum electrolytic capacitor?

Polymer aluminum (PA) electrolytic capacitors were developed as an alternative to liquid aluminum electrolytic capacitors. The liquid electrolyte was replaced by a solid conductive polymer electrolyte. Liquid electrolyte tends to evaporate over time, causing a decrease in capacitance and an increase in ESR [1,2].

What is hybrid polymer technology in aluminum electrolytic capacitors?

In the field of Aluminum Electrolytic Capacitors, the Hybrid Polymer technology offers higher ripple current densities by a factor of, e.g., 5x compared to standard Liquid Electrolyte technology.

Are aluminum electrolytic capacitors a good choice?

Aluminum electrolytic capacitors are an attractive solution here since they can fulfill the key requirements, such as high voltage ratings of up to 500 V, large capacitance of up to 820 μF and high ripple current capabilities at an operating temperature range of $-40\text{ }^{\circ}\text{C}$ to $105\text{ }^{\circ}\text{C}$.

Why should you choose TDK aluminum electrolytic capacitors?

The TDK aluminum electrolytic capacitors feature outstanding ripple current capabilities and very long-term reliability. Design flexibility and engineering expertise allow TDK to offer custom specific solutions. The capacitance of aluminum electrolytic capacitors is defined by the surface of the aluminum anode foil.
