

Thailand s 2025 solar energy storage plan

Overview

How will Thailand's solar capacity grow in 2024?

According to Mordor Intelligence, Thailand's solar capacity is expected to grow from 3.9 GW in 2024 to 5.52 GW by 2029, achieving a compound annual growth rate (CAGR) of 7.2%. The Alternative Energy Development Plan (AEDP) aims to boost renewable energy adoption, supported by: Feed-in tariffs (FiT): Financial incentives for solar producers.

Why is Thailand relying on more than just solar?

To close this gap, Thailand is relying on more than just solar. The government's Alternative Energy Development Plan (AEDP) promotes energy diversification, including storage systems and emerging technologies like green hydrogen. These strategies are designed to not only boost generation capacity but also ensure energy stability and resilience.

Should Thailand add 32GW of new solar capacity?

Ember calls for Thailand to add 32GW of new capacity to its existing solar deployment targets. Image: Sungrow. Adding 32GW of new solar capacity, plus 15GWh of batteries, to Thailand's power generation deployment targets could cut power generation costs by as much as US\$1.8 billion.

Why has Thailand quadrupled its solar power quota in 2024?

The government has quadrupled the annual quota for public solar power projects, from 100 MW to 400 MW in 2024, as part of a broader push to cut electricity costs by 8% and reach carbon neutrality by 2065. This marks a bold step in Thailand renewable energy expansion, backed by aggressive policy shifts and growing investment.
