

The best solar system in the world

Overview

What is the largest planet in the Solar System?

The largest planet in the Solar System, Jupiter has more mass than all of the other planets put together and is second only to the Sun in terms of gravitational power. Jupiter is the first of the gas giants - and the most spectacular. It is large enough to house the rest of the Solar System's planets twice over.

Which planet is the most interesting?

Jupiter is, by far, the most intriguing and fascinating planet. Uranus is the seventh planet from the Sun in our solar system. It was discovered by William Herschel in 1781, making it the first planet to be discovered using a telescope. Unique among the planets, Uranus has an axial tilt of about 98 degrees, causing it to rotate on its side.

What are the weirdest worlds in our Solar System?

Strange Worlds Discover the weirdest worlds in our solar system - the misfits and oddballs with freakish shapes and sizes. Visit an egg-shaped dwarf planet that shouldn't really exist, a tiny moon that looks like a UFO, a tortured patchwork moon, and an eerie ocean world in orbit around Jupiter.

Which planet has the most moons in the Solar System?

Saturn is also the planet with the most moons in the Solar System, having even more than Jupiter and making it the king of the moons. Saturn and its rings, as seen by the James Webb Space Telescope, 30 June 2023.
