

The function of battery cabinet in weak current room

Overview

What should a battery cabinet have?

Insulation system - insulation is also a safety measure a battery cabinet should have. Grille - it allows for free air flow thereby ensuring efficient cooling. Dual-stage venting system - It is a common technology in electric vehicle battery systems. The first stage will prevent water ingress and equalize pressure.

How should a battery room be designed?

Battery rooms shall be designed with an adequate exhaust system which provides for continuous ventilation of the battery room to prohibit the build-up of potentially explosive hydrogen gas. During normal operations, off gassing of the batteries is relatively small.

What rating should a battery cabinet have?

Indoor battery cabinet should have at least NEMA 1 rating. On the other hand, outdoor enclosures for batteries should have a NEMA 3R rating. It is important to note that the NEMA and IP rating varies depending on where you will install the enclosure. Indoor Battery Box Enclosure 2. Mounting Mechanism for Battery Cabinet.

Why do batteries need to be ventilated?

The battery rooms must be adequately ventilated to prohibit the build-up of hydrogen gas. During normal operations, off gassing of the batteries is relatively small. However, the concern is elevated during times of heavy recharge or the batteries, which occur immediately following a rapid and deep discharge of the battery.
