

# The relationship between glass manufacturing and solars

## Overview

---

Could solar glass be the future of energy storage?

**Solar Glass with Integrated Energy Storage:** Imagine a future where the glass itself not only generates solar energy but also stores it. Researchers are developing solar glass that integrates energy storage capabilities, enabling buildings and structures to store solar energy during the day for use at night.

How can manufacturers defend profitability in the Solar Photovoltaic Glass market?

Manufacturers now compete on scale, logistics efficiency, and coating innovation to defend profitability in the solar photovoltaic glass market. Cumulative solar capacity reached 1.6 TWdc in 2023, up 89% on 2022, while building-integrated photovoltaics (BIPV) gained momentum.

Is solar glass the future of building-integrated photovoltaics?

The rise of solar glass also holds significant promise for the building-integrated photovoltaics (BIPV) market, where buildings themselves serve as power-generating structures. Instead of being standalone solar panels, solar glass can be incorporated directly into the design of windows, facades, and roofs.

How will the Solar Photovoltaic Glass market continue to grow?

Competitive strategies range from Chinese producers expanding commodity capacity to Western incumbents investing in circularity, low-carbon furnaces, and specialty coatings. These shifts together position the solar photovoltaic glass market for resilient growth throughout the decade.
