

The role of container substation in Sukfu Djibouti

Overview

What is Djibouti Container Terminal?

Accessible by rail and road from various locations including Ethiopia, it is illustrating its aim of multipurpose facility. The Port of Djibouti Container Terminal has a handling capacity of 350 000 TEU Per annum. Reefer containers can be easily accommodated by 126 reefer plug points available in the yard.

Why are emissions from Djibouti Ports underestimated?

Surprisingly, emissions stemming from the visiting ships at Djibouti ports have been underestimated. One important reason could be the lack of emissions inventory since data on emissions discharged within port areas are not available in Djibouti.

Could a shore power connection accelerate Djibouti port development?

The fact that the Kenyan government has already started the assessment of shore power connection for the port of Mombasa, which represents the first competitor of Djibouti ports, could accelerate the potential application of the technology in the Djibouti ports.

Does Djibouti have a green port policy?

The government of Djibouti had and still has a long fight against climate change challenges. As container ships account for the largest share of ship calls in Djibouti ports, the development of green port policies should be first assessed for container terminals.
