

Tiraspol bifacial solar panel prices

Overview

How much does a bifacial solar system cost?

Bifacial panels have transparent front and back sides that can both capture solar energy for your home. The average 4kW bifacial system will cost £5,500 - £6,600, and could save you £860 per year on your electricity bills. Bifacial panels are highly efficient at capturing solar energy, potentially increasing your solar panels' output by up to 30%.

Are bifacial solar panels better than monofacial panels?

The technology behind solar panels continues to evolve and improve. Manufacturers are now able to produce bifacial panels, which feature energy-producing solar cells on both sides of the panel. With two faces capable of absorbing sunlight, bifacial solar panels can be more efficient than traditional monofacial panels – if used appropriately.

How much do bifacial panels cost in the UK?

For the average home in the UK, bifacial panels in the UK tend to cost between £9,900 - £11,000, including installation. Generally, because of their advanced design and specialised equipment, bifacial panels prices are around 10% higher than the cost of solar panels with a monofacial design.

What is a bifacial solar panel?

A bifacial solar panel is a modern solar technology that captures sunlight on both the front and back sides of the panel. While traditional panels absorb light only from one side, bifacial panels take advantage of reflected light from surfaces like rooftops, concrete, or the ground to generate extra power.
