

# Two 48v inverters

## Overview

---

What is a 48V solar inverter?

A 48V solar inverter converts direct current (DC) generated by solar panels into alternating current (AC), specifically designed for 48V battery systems. Its higher voltage design minimizes energy loss during transmission, making it ideal for medium-to-high power applications such as home energy storage, small farms, or communication towers.

How does a 48V inverter work?

Some 48V inverters come integrated with charging capabilities (known as inverter chargers), offering:

- Solar Charging: Charge batteries via solar panels.
- Grid Charging: Supplement energy from the grid during low sunlight.
- Automatic Switching: Seamlessly transition between power sources for uninterrupted supply.

Can a 48V inverter charge a battery?

Compatibility: Works with lead-acid, lithium-ion, and other battery types.

Some 48V inverters come integrated with charging capabilities (known as inverter chargers), offering:

- Solar Charging: Charge batteries via solar panels.
- Grid Charging: Supplement energy from the grid during low sunlight.

Should you connect two solar inverters in parallel?

**Increased Power Output** By connecting two solar inverters in parallel, you significantly boost the system's total power capacity. For example, two GA5548MH inverters in parallel will provide 11kW of total power—ideal for applications requiring high power output.

**Enhanced Reliability** A solar inverter parallel connection offers redundancy.
