

Two-way charging of mobile energy storage containers for bridges in Croatia

Overview

Can a wireless charging road be operated by an independent entity?

In practice, each wireless charging road can be operated by an independent entity and has its own energy storage system. The energy management of this distributed system is an interesting future research direction. Jie Shi: Conceptualization, Methodology, Numerical study, Writing – original draft.

Can a community energy storage system meet EV charging demands?

To this end, an optimization framework that incorporates FCSs and MCSs is proposed to meet the spatiotemporally distributed EV charging demands. A community energy storage system (CESS) is integrated into the system to enhance the flexibility and increase the use of renewable energy in EV charging.

Can unidirectional and bidirectional charging be integrated into a hybrid energy storage system?

In the case of bidirectional charging, EVs can even function as mobile, flexible storage systems that can be integrated into the grid. This paper introduces a novel testing environment that integrates unidirectional and bidirectional charging infrastructures into an existing hybrid energy storage system.

Why should electric vehicle charging roads be equipped with energy storage systems?

An efficient control of the energy storage system reduces both energy cost and the power grid pressure. Wireless charging roads equipped with energy storage systems are promising electric vehicle charging solutions by virtue of their strong advantages in time saving and reduced pressure on the existing power infrastructure.
