

# **Uninterruptible Power Supply for Nauru Distribution**

## Overview

---

Are battery-backed uninterruptible power supplies reliable?

Reliability of power sources is an increasing challenge in many sectors and battery-backed uninterruptible power supplies (UPS) are one option to protect and keep electronic equipment operating in the event of grid power failure.

What are the requirements for power supplies and ups in critical infrastructures?

Specific requirements for power supplies and UPS systems in critical infrastructures concern reliability, robustness, and security: UPS systems ensure an uninterrupted power supply during power outages and enable an orderly shutdown of systems during prolonged outages.

Can Puls power an uninterruptible power supply?

Currently, PULS offers two options for an uninterruptible power supply to the load in an emergency: both double-layer capacitors and lead-acid batteries can serve as energy storage in DC-UPS systems for industrial applications.

Why do critical infrastructures need ups?

Many critical infrastructures are legally required to take measures to ensure a continuous power supply. UPS systems help meet these requirements and ensure compliance with relevant standards and regulations. The power supply in critical infrastructures is of paramount importance for the safety and well-being of society.
